API provided Programming, Planning A/E and Construction Administration services for complete renovation of 5,000 square feet of existing Men's Locker Room for a Nursing Skills Laboratory. The new Nursing Skills Lab supports pre-licensure courses allowing student to practice patient care procedures and skills in a simulated environment prior to performing these same procedures and skills in a hospital setting.

"Your guidance and support helped us to keep on track and find out answers to everything from equipment specs, to electrical needs, to AV wiring, to furniture dimensions and beyond...Even when we kept changing our minds or wanted to squeeze in more, you were patient and professional."

In the end we developed a wonderful simulation center that works so well. The layout is great and the faculty, staff and students truly appreciate and benefit from that every day. Beyond the function, the simulation center is beautiful--your advice and expertise in choosing the color palette, the types of wood, the flooring, the aesthetics were impeccable."

Paula Herberg, Chair Department of Nursing
